Traction devices are required on these highways during severe winter weather.

Winter weather is challenging, especially in the mountains and UDOT wants to keep you safe. During severe winter weather, drivers must have:

TRACTION DEVICES (TIRE CHAINS, TIRE CABLES, SNOW SOCKS, OR STUDS)

OR

TIRES WITH M+S OR 3PMSF RATING; WITH OR WITHOUT STUDS

Per Utah Administrative Code R920-6

BE PREPARED
Traction requirements may go into effect before storms

Big Cottonwood Canyon (SR-190) and Little Cottonwood Canyon (SR-210) have stricter traction requirements than other roads.

Vehicle tires must have a tread depth of at least 5/32 when traction requirements are in effect.

2WD vehicles must have **3PMSF rated tires on all wheels or traction devices on both drive wheels.**

4WD/AWD must have **M+S or 3PMSF tires on all wheels or traction devices on at least two drive wheels.**

Visit the UDOT website for road, traffic and travel information.
